

Your transport management system
in the Clouds!

Truck-Net cloud based haulage system is
browser based with no software to install

SOFTWARE THAT TICKS EVERY BOX

We designed Truck-Net to support and improve the productivity of transport businesses of all sizes – whether you run a large national organisation, same-day courier service or you're an owner driver.

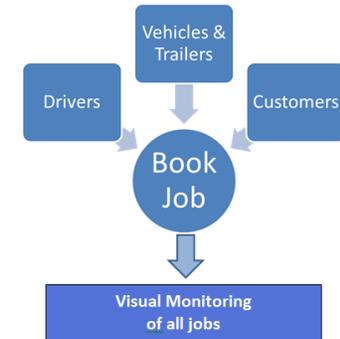

It offers the flexibility and functionality required to put efficiency at the centre of your business

The Truck-Net cloud based haulage system will take the headache out of organising your work with automated job quoting, booking and invoicing – working smarter will help maximise your profit!

This affordable, innovative system has recently been launched by Prodigy Global Ltd. and it will transform end to end processes, guaranteeing significant increases to productivity. This automated system is browser based and has no software to install! The system will provide a business solution for all size of organizations. Cloud computing is fast becoming the new norm. Many businesses are moving to the cloud because it offers flexibility, increases efficiency and helps improve cash flow by cutting out the high cost of computer hardware. The environment gets a little love too. When your cloud needs fluctuate, your server capacity scales up and down to fit. So you only use the energy you need and you don't leave oversized carbon footprints. The developers of Truck-Net offer full support during planning and installation and will work with you on an ongoing basis.

The developer, Prodigy Global Limited is a Private Limited Company and its principal business activity is business and domestic software development.

The company has extensive expertise in web based technology and is supported by a professional and experienced management team.

Cloud based Haulage/Transport system

Truck-Net
*Designed by the industry
for the industry*

Implementing Truck-Net is easy – 6 simple steps!

1. **Setting up users** - .After deciding who is going to administrate the system, additional users can be added in a variety of roles – *including customers*
2. **Entering Data** – Your own data is added initially which includes all your main resources such as manpower, vehicles, trailers and customers. The data can be added one by one or you can upload multiple items
3. **Booking Jobs** – Booking jobs or creating a quote is all done with the click of a button using drop down menus using your data and preloaded costings and Google Maps
4. **Monitoring Jobs** – At the click of a mouse you can see all your jobs on one screen in real time
5. **Invoicing** - Once work has been completed it can be invoiced immediately. It's possible to review all invoices and make amendments if necessary
6. **Reports** - There are a variety of system reports available on Truck-Net

Developed by Prodigy Global Ltd

Company Registration No. 62012

- Automated quotes
- Automated invoicing
- On-line Job Booking
- PDA Digital signature capture
- Web booking
- Live Tracking

So what you need to run Truck-Net

Truck-Net requires connection to the Internet in order to save data to a database. Data saved in the database can be seen using any major Internet browser. There is no software to load on to your pc. You will be supplied a URL (*basically a web address*) which will direct you to a system login page. The system will work on most browsers but google Chrome is recommended.

The system is intuitive and setting up the basic data is a routine admin task. The system is populated with some pre-loaded data (*costs, vehicle types and Google Maps APIs for example*).

When the basic information has been loaded on to the system then job quoting, booking and invoicing becomes a fully automated process.

TRUCK-NET extras:

POD Manager

For those who initially only want to improve their management of PODs (Proof of Deliveries), Truck-Net PODs Manager is designed to help you and your customers easily and efficiently keep track of PODs.

Truck-Net Mobile

Truck-Net Mobile digitally captures Goods On Board (GOB) and Proof of Deliveries (PODs) on mobile devices – you no longer have to manually record and process them.

Truck-Net Web Booking

Truck-Net Web Booking service is all about making life easier for the customer by allowing them to easily and quickly obtain quotes and book jobs online. Instant access when required.
